

## **Jazinga Integrates with MegaPath Services to Deliver End-to-End VOIP Phone System Capabilities for Resellers Targeting Small Businesses**

### *MegaPath SIP Trunking Service Certified for Interoperability with Jazinga Unity Small Business Phone System*

Toronto, ON ([PRWEB](#)) July 28, 2011 -- Jazinga, a small business phone system manufacturer, today announced the completion of comprehensive testing and certification between Jazinga's Unity 2000 IP PBX and MegaPath's Integrated Voice SIP trunking service. As a result, resellers serving small businesses can offer a seamless VoIP solution that delivers significant cost savings and extensive and reliable business feature sets, along with exceptional customer service.

“Both customers and resellers will be pleased with the combination of Jazinga's Unity 2000 IP PBX with our Integrated Voice SIP service because of its ease of use, extensive functionality and affordable price point,” said Dan Foster, President of Business Markets, MegaPath. “Additionally, new features like voicemail to email, mobile phone integration, and remote office phone support meet the flexible and demanding needs of the small businesses eager to present a 'big company' telecommunications experience to their customers.”

The integration of MegaPath's SIP trunking service and Jazinga's system allows small businesses to maximize their communications potential and ramp their approach to providing excellent customer service. “The fact that a client can call a Jazinga customer across their MegaPath line, and that the Jazinga system could either simultaneously ring that customer's desk and mobile phone, or provide the message in email format to the customer's mobile phone if he/she missed the call, is very attractive functionality to today's small business owner,” comments Rod Weir, Jazinga's VP of Alliances. “Both Jazinga's customers and resellers stand to benefit from this recent certification with MegaPath's SIP voice service.”

Jazinga's Unity system exists to both ease the affordability of owning and operating a business-class communication system as well as to provide the functional and flexible needs of the modern-day business owner/operator. Capabilities including a wizard-driven install setup, auto-discovering and configuring of a broad range of leading SIP telephones, distinctive ringing, and nested auto-attendants help the small business owner keep up with the pace and challenge of doing business today.

Customers of all sizes rely on MegaPath for its secure and high-speed services, round-the-clock support, single bill reporting, responsive monitoring, and a private nationwide network. The Company's Integrated Voice allows customers to leverage their existing PBX, while combining voice and data over a single dynamic broadband connection for increased operational efficiencies and reduced costs. On average, MegaPath's voice solutions save customers 50 percent compared to traditional phone services.

#### About Jazinga

Jazinga provides an affordable, yet multi-featured, communications system designed especially for small businesses. Ideally suited to organizations of fewer than 50 people, the Unity 2000 IP PBX is a sophisticated corporate phone system, distinguished by its user interface, simplified wizard installation and telephone set auto-configuration capability— in a less than 20 minute setup time. The system supports a mix of traditional and/or VoIP services. Jazinga Inc. is privately held and headquartered in Toronto, Canada.
